

## Codima Toolbox All In One

### Managing Complexity and Risk

Time starved and cost conscious, IT departments find it a struggle to manage increasingly complex networks. In addition, many have to contend with VoIP networks, installed to achieve cost efficiencies but which require constant monitoring and management.

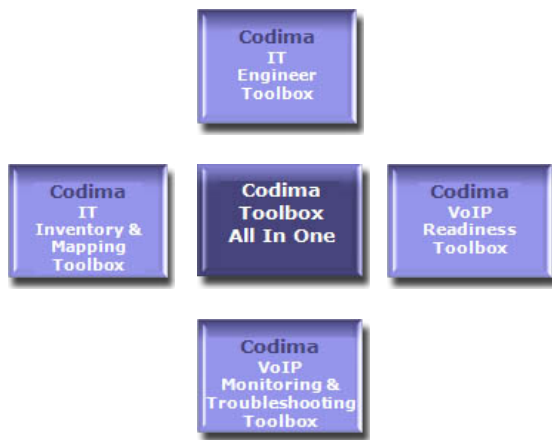

### End-to-End Management from a Single Console

The Codima Toolbox All In One is a powerful and fully integrated solution that manages both the data and VoIP networks through a single management system.

Utilizing the toolbox, users can accurately inventory assets, automatically plot devices directly in Microsoft® Office Visio®, monitor network performance in real-time, evaluate a network for VoIP installation, and monitor and troubleshoot VoIP networks post deployment.

A common reports system, an alarm and events system as well as consistent GUI and methodology across all the Toolboxes enables users to manage both data and VoIP networks through a single management console. A unique One Click Management and dashboard approach makes it easy to navigate all diagnostics.

The Toolbox automatically provides expert analysis through the Automated Correlation Engine. The engine analyzes history charts and identifies correlations in the data gathered by the toolboxes which can identify the source of overloads or ping storms.

### Included in the Codima Toolbox All In One are:

#### Codima IT Inventory & Mapping Toolbox

Codima IT Inventory & Mapping Toolbox lowers costs by automating Asset Inventory, and mapping devices directly into Microsoft® Office Visio® drawings. Built in to the Toolbox is a world class algorithm that maps even the largest networks without getting into a tangle. It can accurately and automatically identify more than 8,600 device types (and growing). Easy to use, the Codima IT Inventory & Mapping Toolbox runs out of the box assisting in network audits, planning and design.

#### Codima IT Engineer Toolbox

The Codima IT Engineer Toolbox provides real-time network performance that isolates bottlenecks on the network or on user selected paths. It makes problem solving simple by highlighting bottlenecks in real time on the Visio® maps. The Engineer can then isolate the cause of the bottleneck using highly extensive deep drill reports and live views that show device specific real time traffic trends.

### Codima VoIP Readiness Toolbox

Easy to install and deploy, the Codima VoIP Readiness Toolbox enables IT consultants, system integrators and in-house IT teams to stress test the phone loading limits on all types of VoIP networks, preventing unexpected implementation costs and project delays as well as ensuring end user satisfaction and adoption.

### Codima VoIP Monitoring & Troubleshooting Toolbox

The Codima VoIP Monitoring & Troubleshooting Toolbox delivers easy to use core VoIP management for SIP and Cisco Skinny networks to monitor Quality of Service (QoS) and troubleshoot VoIP networks in real time.

### Cisco Approved

This complete, cost effective network management solution delivers a return-on-investment within the shortest payback time. Cisco endorses the use of the Codima Toolbox All In One by its partners for the Installed Base Lifecycle Management (IBLM) Program.

### Key Features

- Powerful, automated & fully integrated management tools for data & VoIP Networks
- One Click Management and clear dashboards make it easy to navigate
- Accurate IT asset inventory using current network asset information obtained from network devices
- Granular visualization in Microsoft® Office Visio® of entire 'live' network and bottlenecks
- Seamless and rigorous VoIP readiness testing
- Facilities to test multiple paths in parallel using different test patterns
- VoIP management through monitoring and QoS measurement ensures good call quality experience for end users
- Facilities to identify and prioritize problems and errors in real time for easy troubleshooting
- 24/7 QoS Tracking using a comprehensive set of tools to provide analysis globally, by phone or by user defined phone groups
- Comprehensive, context sensitive help facility
- Real time live views providing a clear and accurate picture of loading, priority, frames size and ICMP trends

### Tools

Asset Inventory & Reports ■ Mapping ■ Visualizing in Microsoft® Office Visio® ■ IP Pinging ■ Global Alarm System ■ SNMP Monitoring ■ Bottleneck Analysis ■ Path Analysis ■ Protocol Analysis ■ Passive Analysis ■ VoIP Pre Deployment Assessment ■ VoIP Monitoring ■ VoIP Troubleshooting ■ Frame Flow Analysis ■ VoIP Simulation ■ Reports Manager ■ Remote Manager ■ Multi Site Scheduler ■ SQL Call Logging ■ Remote Probes
