

Codima IT Inventory & Mapping Toolbox

The Strain on IT

The current economic climate has put additional pressures on IT professionals to deliver more productive and efficient technology services to facilitate business growth. Many are also struggling with budgets and resources that have remained stagnant for several years.

Multiple operating systems, remote workers and remote offices, new hardware or software bolted on to legacy systems and a variety of third-party applications, have added complexity to company networks.

In order for technology to deliver the services needed for a business to grow, IT efficiency and productivity have become increasingly important. Processes that were previously dealt with manually need to be automated to save time, resources and reduce costs.

The Need for Automation

Network inventory and mapping has become all the more important to a business when cost efficiencies have to be identified. By bringing visibility to any network, users are able to spot vulnerabilities and eliminate wasted resources.

Network inventory and mapping used to be a manual, time-consuming process, especially if multiple or remote sites are taken into account. Manually visualizing whole networks accurately in diagram format so that they can be shared with colleagues can be complicated.

Network management software that fully automates the process from end-to-end and integrates with other tools to offer a single management console across data and VoIP networks could save organizations time, resources and cost.

Scalable & Enterprise-ready

Codima IT Inventory & Mapping Toolbox lowers costs by automating manual tasks, and improves productivity by simplifying network management. Easy to use, the Codima IT Inventory & Mapping Toolbox runs out of the box assisting in network audits, planning and design.

Regardless of whether it is a small organization or an enterprise multi-site corporation, Codima IT Inventory & Mapping Toolbox does not run out of steam. Built in to the Toolbox is a world class algorithm that maps even the largest networks without getting into a tangle.

Fully Automated, Accurate Asset Discovery

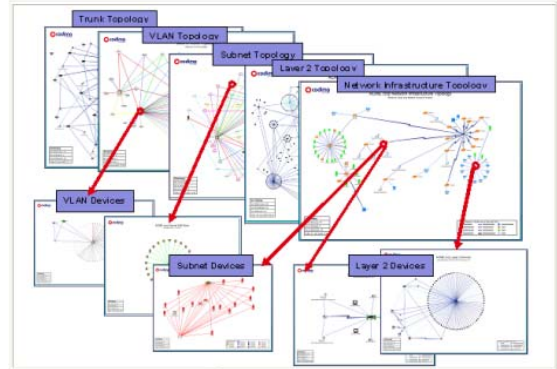

With a comprehensive knowledge base to draw from, Codima IT Inventory & Mapping Toolbox can accurately and automatically identify more than 8,600 device types (and growing). Moreover, this tool gives a unique view of dormant and active assets.

Direct Visualization in Microsoft® Office Visio®

Unlike other solutions, the Codima IT Inventory & Mapping Toolbox automatically plots devices directly into Microsoft® Office Visio® drawings using only the Visio® functions that are required by the Toolbox. This simplifies operations, saves valuable time and provides high quality topology drawings covering the network infrastructure. Visio® maps

come alive with, for example, VM Ware systems highlighted and vendor devices automatically allocated unique colors.

Automatic visualization of entire networks in Visio®

Cisco Approved

This complete, cost effective network management solution delivers a return-on-investment within the shortest payback time. Cisco endorses the use of the Codima IT Inventory & Mapping Toolbox by its partners for discovery and asset reporting.

Key Features

- Accurate IT asset inventory using current network asset information obtained from network devices
- Granular visualization in Microsoft® Office Visio® of entire 'live' network
- Multi site scheduler used to discover networks from a central point
- Remote Manager used to monitor and analyze remote networks from a central point
- Comprehensive real time protocol analysis tool with sophisticated pre- and post-capture filtering capabilities
- Real time live views providing a clear and accurate picture of loading, priority, frames size and ICMP trends
- Historical statistical trend reports in Word on demand or scheduled daily, weekly, monthly
- Quick export of History Charts and Report pages to HTML

Tools

Asset Inventory & Reports ■ Mapping ■ Visualizing in Microsoft® Office Visio® ■ Multi-site Scheduler ■ IP Pinging ■ Global Alarm System ■ Protocol Analysis ■ Passive Analysis
